

DeltaQ Spreadsheet Notes:

In the spreadsheet you enter the measured pressures and flows in the appropriate columns (in blue), then press the solve button. You need to enable macros when loading the spreadsheet.

The spreadsheet uses the Excel solver and Excel needs to be set-up correctly for this to function.

First, the solver needs to be installed (some Excel installations don't include it).

Second you need to click on the tools tab and select the add-ins list.

The "solver Add-in" needs to be checked.

Sometimes you need to "uncheck" the "solver add in" checkbox, click OK. Then recheck the box and click OK.
